

PowerShift is a full-featured enterprise resource planning (ERP) system designed around world class processes to manage and control the enterprise. Connectivity options provide seamless integration to external systems and best-of-breed third-party solutions.

## Electronic Data Interchange (EDI)

- Receive 850 purchase order transactions
- Send 810 invoice transactions
- Send 850 purchase order transactions
- Send 855 purchase order acknowledgments
- Send 856 advance shipment notices
- Configure EDI import criteria by trading partner

## Manufacturing Execution System (MES)

- Captures inventory transactions by automated production equipment
- Transaction files are updated at user-specified polling intervals
- Processing exceptions are emailed to the designated administrator

## Warehouse Management System (WMS)

- Sales order details are sent to the WMS for picking; once authorized for picking, further changes to the sales order are blocked
- Purchase order details are sent to the WMS for validating receipts
- Transfer details are sent to the WMS for validating receipts
- Receive shipment details from the WMS to confirm and invoice shipments completed
- For the branch in which the WMS is active, PowerShift inventory changes are blocked

## XML Export & Import

PowerShift supports XML export & import, enabling mass data changes to PowerShift data files with MS Excel, MS Access or other PC-based application.

## Carrier Interfaces

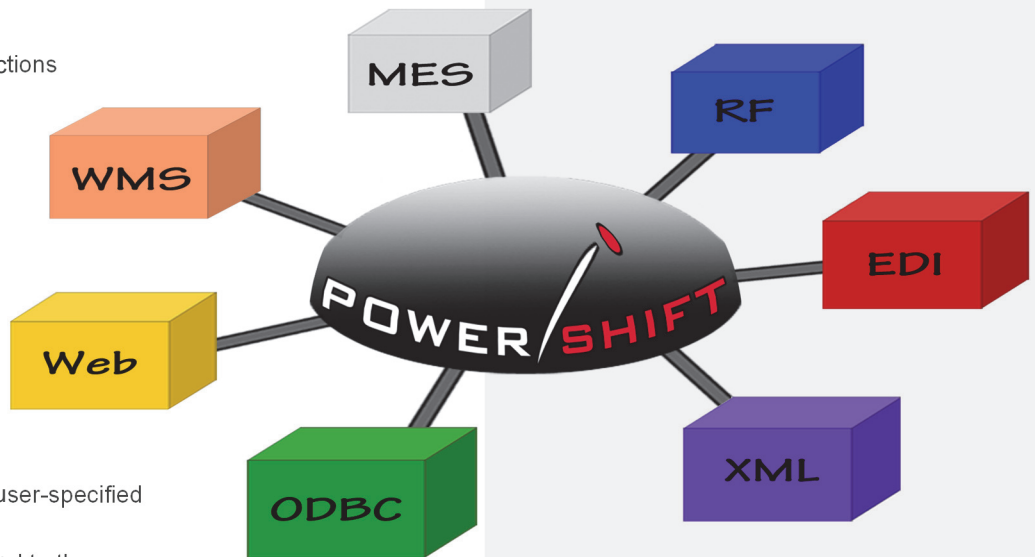

UPS Worldship and FedEx Ship Manager are two examples of third-party software that interoperate with PowerShift using ODBC connectivity. Coupled with PowerShift's ability to include bar codes on documents, you can simplify package shipping. Connect to the carrier-provided database and scan shipment barcodes. Name, address and other data required to complete shipments is populated, saving input time and improving data accuracy.

## ERP Dashboards

Use the ODBC interface to connect to graphing applications such as Crystal Reports to provide an at-a-glance view of current metrics and performance indicators. You choose what is important to your operation and how often to refresh the data. The PowerShift JOBS application can schedule the generation of operational data during off hours or the data can be directly accessed.

## Customer Relationship Management (CRM)

Share customer and sales information between PowerShift and CRM software via the ODBC interface. Connect to external lead sources with the CRM; PowerShift takes over when a lead becomes a sale.

Open Database Connectivity (ODBC) enables PowerShift to seamlessly interoperate with external applications:

- ◆ Microsoft Access
- ◆ Microsoft Excel
- ◆ Crystal Reports
- ◆ Third-Party Solutions
  - CRM
  - Forecasting
  - Configurators
  - More!!!

## E-Business

PowerShift enables your customers and sales reps to view orders and invoices on the Web

## QANTEL Print Connector Provides Advanced Printing Capabilities

- ◆ Print to any printer that Microsoft Windows supports, including laser and ink jet printers
- ◆ Print to any device that is configured as a printer, including fax devices
- ◆ Print multiple copies, select page orientation, change paper trays, and spool print jobs

## Drop File Processing

- Drop file processing automates EDI, XML and other interface updates
- You specify the file location; PowerShift checks for and processes the file at user-defined polling intervals
- Exceptions are emailed to the designated administrator
- Drop files are optionally retained for archive

## Email

- PowerShift extends the Enterprise and improves responsiveness to customers and vendors as reports and customer- and vendor-specific forms can be sent via email in many formats:
  - PDF attachments
  - CSV attachments
  - In-line HTML
  - In-line text
  - Text file attachments
- CC and BCC (allows immediate notification to sales managers or other staff of orders, shipments, etc.)
- Delivery and read receipt notifications
- Event messaging generates email messages to designated users when issues arise
- Fully-integrated with the PowerShift job scheduler so that reports are executed when scheduled and emailed as directed

## File Output

- PowerShift offers several file output options:
  - CSV files
  - text files
  - output directly to Excel
  - spooler output to text file
  - spooler output to PDF file
